THE OPEN UNIVERSITY OF SRI LANKA FACULTY OF HEALTH SCIENCES DEPARTMENT OF PSYCHOLOGY & COUNSELLING 2020/2021 – SEMSETER I—FINAL EXAMINATION

BSC (HONS) IN PSYCHOLOGY PLU 5305 - ADVANCED RESEARCH METHODS AND STATISTICS- LEVEL 5 FINAL EXAMINATION PAPER DURATION: 02 HOURS

DATE: 23.03.2022

TIME: 1.30 pm - 3.30 pm

INDEX NO:

SECTION 2: ESSAY QUESTIONS (60 MARKS)

Choose <u>04 out of the 06 questions including at least one question from Section B</u> and answer using the provided answer sheets.

Section A

- a) Explain two (02) different situations that you use One-Way ANOVA and Two-Way ANOVA to analyse your data. (Explain examples with variables, their types, and the objective of using the test).
 - b) Explain the role of a Confounding variable and a Mediating variable with proper examples. (8 Marks)
- 2.2 a) "A descriptive analysis of a survey is an important and essential component to the researcher and for an examiner/audience". Elaborate this statement and discuss the importance of a descriptive analysis.

 (5 Marks)
 - b) Explain <u>four</u> (04) methods that can be used to ensure/ test the accuracy of a multiple regression analysis. (10 Marks)

2.3

- a) What are the outliers and influential points in a data set? Explain the benefits of removing such data points from a data set. (5 Marks)
- b) Discuss the reasons for using Parametric and Non-parametric statistical tests along with advantages and disadvantages of the two techniques. (4 Marks)
- c) Compare and contrast "Quantitative" and "Qualitative" research approach.

(6 marks)

2.4 Figure 1 illustrates the results of the initial confirmatory factor analysis. The analysis consists of <u>four</u> (04) variables/dimensions as the dependent variable (Dep1-Dep6) and three independent variables as Ind11-Ind14, Ind21-Ind24, and Ind31-Ind36. Explain how do you develop the dimensions by eliminating unnecessary/inappropriate items (if any).

(15 marks)

9	.704	3.520	78.116				
10	.594	2.972	<u>81.088</u>				·

Extraction Method: Principal Component Analysis.

a. When components are correlated, sums of squared loadings cannot be added to obtain a total variance.

Extraction Method: Principal Component Analysis. Rotation Method: Promax with Kaiser Normalization.

a. Rotation converged in 7 iterations.

Section B

- 2.5 This is a part of a transcript from an interview held with a male aged 55 years and currently on medical leave. He is a chronic alcoholic who is under medical care at a rehabilitation facility. Read this carefully and answer the following questions.
 - a) List coding categories emerging from the above answers given by the participant. (6 marks
 - b) Provide a table of themes with emerging themes and they should be supported by interview extracts. (9 marks)

Question: Can you explain about how you understand about your current health status?

Answer: I have made a mess...a big mess of my life...nothing can be reversed now as I am an alcoholic now. They say I will die soon if I cannot stay sober after leaving this treatment centre...I don't know if I can...well...health is not just my liver....(laughs loudly).. I feel I lost most of the time and cannot do anything without taking my daily drinks (sighs heavily) ..you know it's not that easy...as I drank this stuff since I was still at school ... I hope they can help me this time...

Question: Can we talk about how alcohol is affecting your relationships with others? (partners, friends or relatives)

Answer: Well...as I said...I have made a mess of my life...I got only my sister now....my wife and children are living separately...they threw me out as soon as I was sent on compulsory medical leave...my sister is a good soul...she always cared for me...even when I was a kid who always got into trouble...

Interviewer: This must be a very difficult situation for you.

Question: Can you also talk a about your relationship with your friends and others who were close to you?

Answer: Oh...they are long gone...when I was getting warnings from the managers and I had to pay for all these treatment...they went away...I was no use to them anymore...they never cared...I only understand now. I feel really ashamed now...(tears)...I should not have trusted their words...I was apparently a fun guy when I take the drink...so they always encouraged me to take a shot after work...what lies...now no one cares..

- **2.6** Qualitative research in Psychology field is a growing sub field of research with many challenges.
 - a) Interviews are the main method of data collection. Explain the term 'neutral facilitator' related to the interviewing process? (5 marks)
 - b) Discuss the strengths versus limitations of using qualitative methods in psychological research. (10 marks)
