## PSC 1222 — Basic Chemistry for Laboratory Practice 2009/10 Home Assignment

Pleas write the answers in a separate sheets of paper.

- 1. At 400°C, a student starts with pure HI at a concentration of 0.22 M. Some of the ### NEXCHINGER BY ### ## THE SHIPHINGHING XHINEHINGH XF ### HE FRIEND HE RE 0.020 M.
  - (i) What is  $[I_2]$ ?

- (ii) What is [HI]?
- (iii) What is the value of the equilibrium constant at 400°C?
- (iv) What will happen if some I2 is withdrawn from the system?
- (v) What will happen if some I2 is added to the system?

(ii) Write the corresponding balanced chemical equation for the expression for K<sub>c</sub>.

$$K_c = \frac{[NH_3]^4 \times [O_2]^5}{[NO]^4 \times [H_2O]^6}$$

- 3. The concentration a NaOH solution is 0.020 M.
  - (i) What is the concentration of H<sup>+</sup>ions?
  - (ii) What is the pH of the solution?
  - (iii) A 25.0 mL of this solution was titrated with H<sub>2</sub>SO<sub>4</sub> and the end point reading was 20.00 mL. What is the concentration of H<sub>2</sub>SO<sub>4</sub>?
- 4. Arrange the following compounds each having a concentration of 0.2 M in the order of decreasing pH. Explain your answer.

  H<sub>2</sub>SO<sub>4</sub>, HNO<sub>3</sub>, KOH, CH<sub>3</sub>COOH, Ca(OH)<sub>2</sub>
- 5. (i) Give the oxidation number of chlorine in,
  - (a) Cl<sub>2</sub> (b) HCl (c) ClO<sub>3</sub> (d) ClO<sub>4</sub>
  - (ii) Balance the following redox equations for reactions in the acidic medium.
    - (a)  $Cu(s) + NO_3(aq) \rightarrow Cu^{2+}(aq) + NO_2(g)$
    - (b)  $Cr_2O_7^{2-}$  (aq) +  $C_2H_4(g) \rightarrow Cr^{3+}$  (aq) +  $CO_2(g)$
  - (iii) Identify the species that is oxidised and reduced of each equation.
  - (iv) Identify the oxidizing and the reducing agent in each equation.

(i)  $[H_2] = [I_2] = 0.020 \text{ M}$ 

(ii) No of moles of HI required to give 1 mol of 
$$H_2$$
 = 2 moles

"" , 0.02 mol of  $H_2$  = 2 x 0.02 mol = 0.04 mol

"" , HI remained in equilibrium = 0.22-0.04 mol

= 0.18 mol

 $= 0.18 \, \mathrm{M}$ 

Concentration of HI

(iii) 
$$K_c = [H_2][I_2]$$

$$\overline{[HI]}$$
=  $(0.02 M \times 0.02 M) / 0.18 M$ 
=  $0.01 M$ 

- (iv) More and more HI will be decomposed. As a result [HI] will reduced and [H<sub>2</sub>] will be increased.
- (v) More and more HI will be formed with the reaction of I2. As a result [HI] will be increased and [H2] will be reduced.

2. (i) 
$$2SO_3 \rightarrow 2SO_2 + O_2$$

$$Kc = [SO_2]^2[O_2]$$

$$\overline{[SO_3]^2}$$

(ii) 
$$4 \text{ NO} + 6H_2\text{O}$$
  $4\text{NH}_3 + 5\text{O}_2$ 

3, (i) NaOH 
$$\rightarrow$$
 Na<sup>+</sup> + OH

0.02 0.02 0.02

 $K_{w} = [H^{+}][OH]$ 
 $10^{-14} = [H^{+}] 0.02$ 

 $[H^{+}] = 0.5 \times 10^{-12} M$ 

(ii) 
$$pH = -log \cdot [H^{+}]$$
  
 $pH = -log \cdot (0.5 \times 10^{-12})$   
 $pH = 12.3010$ 

(iii) 
$$2\text{NaQH} + \text{H}_2\text{SO}_4 \rightarrow \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}_4$$
  
2 1

No of moles of NaOH in 25 ml =  $(0.02/1000) \times 25 \text{ mol}$ ,, ,, H<sub>2</sub>SO<sub>4</sub> required =  $(1/2) \times (0.02/1000) \times 25 \text{ mol}$ = 0.25 / 1000Concentration of H<sub>2</sub>SO<sub>4</sub> =  $(0.25/1000) \times (1000/20)$ = 0.0125 M

4. H<sub>2</sub>SO<sub>4</sub> and HNO<sub>3</sub> are strong acids. One mole of H<sub>2</sub>SO<sub>4</sub> gives 2 moles of H<sup>†</sup> while HNO<sub>3</sub> gives only one mole of H<sup>†</sup>. Therefore, H<sub>2</sub>SO<sub>4</sub> is more acidic than HNO<sub>3</sub>.

Acetic acid (CH<sub>3</sub>COOH) is a weak acid so less acidic.

pH = -log [H<sup>+</sup>]. Therefore, pH decreases when [H<sup>+</sup>] increases.

KOH and Ca(OH)<sub>2</sub> are strongly basic. One mole of Ca(OH)<sub>2</sub> gives 2 moles of OH while KOH gives only one mole of OH. Therefore, Ca(OH)<sub>2</sub> is basic than KOH.

pOH = - log [OH]. Therefore, higher the amount of OH, lower the pOH value.

pH = 14 - pOH. Therefore, pH increases with decreasing pOH.

The order of decreasing pH is,

Ca(OH)<sub>2</sub>, KOH, CH<sub>3</sub>COOH, HNO<sub>3</sub>, H<sub>2</sub>SO<sub>4</sub>

- 5. i) a) 0 b) -1 c) +5 d) +7
  - ii)  $2NO_3 + 4H^+ + Cu \longrightarrow Cu^{2+} + 2NO_2 + 2H_2O^{-3}$  $16 H^+ + 2Cr_2O_7^{-2-} + C_2H_4 \longrightarrow (4Cr^{3+} + 2CO_2 + 10H_2O^{-3})$
  - iii) oxidized species a) Cu b) C₂H₄ ा
    - Reduced species a) NO<sub>3</sub> b) Cr<sub>2</sub>O<sub>7</sub><sup>2</sup>
  - iv) Oxidizing agent a)  $NO_3$  b.)  $Cr_2O_7^{2}$  reducing agent a) Cu b)  $C_2H_4$
